THE SKY'S THE LIMIT

More than 80 young rocketeers, ages 5 through 12, some pictured above, put their aerospace engineering skills to the test last week at the Champions Science Adventures Summer Camp at Caldwell College. The camp enriched participants' knowledge of space and rocketry principles. Youngsters used this new information by constructing and launching their own model rockets, which can travel at speeds greater than 50 mph. Clockwise from the right, two solid-fuel propelled rockets clear their launch pads. Below, Kevin McCormac, 5, gazes skyward, following his rocket. Bottom, Nicco McCormick, 6, plays with his rocket after a successful launch. Below, Theo Rosenberg, 5, prepares for liftoff.
