

Andy Allan the Science Wiz Director of Curriculum Development for Science Adventures™

Andy Allan, scientist and educator with Science Adventures™, is passionate about inspiring a world of learners through hands-on science fun. As a teacher, Andy is familiar with the sense of wonder and natural curiosity younger children have for science. He believes it is important to nourish that interest.

Andy's passion for science developed as he learned more about the world's greatest scientists and their hard earned discoveries. From Newton's laws of motion to Einstein's theory of relativity, Andy's fascination was with the work and experimentation that went into the uncovering of new information about the universe.

Through the Science Adventures programs, Andy develops lessons and experiments that keep children on the cutting edge of discovery by introducing them to the relevant research being studied and developed today. This year's Powerful Planet summer camp, for example, will teach the importance of energy efficiency and the need to manage our natural resources from wildlife to oil.

Andy has been with Science Adventures for the last 16 years. In his current position as Director of Curriculum Development, Andy works at creating hands-on inquiry based programs that inspire a joy in science through fun, innovation, and creativity. Andy holds a B.S. in Physics and Microelectronics, as well as a secondary teaching degree. He is based in Littleton, Colorado.
