**Champions Science Adventures™ Simplifies Science Education for Community and Educational Institutions Nationwide with the Introduction of Classroom Kits**

*Classroom Kits provide curriculum and all supplies needed to implement hands-on science lessons*

**Littleton, Colorado – October 13, 2009** – Champions Science Adventures™, a leading provider of hands-on science camps and after school clubs, is unveiling a new offering for community centers, parks & recreation facilities and schools across the country. The new Science Adventures Classroom Kits provide organizations with full lesson plans and all experiment components needed to host hands-on, educational science programs.

Science Adventures Classroom Kits offer cutting-edge curriculum that meets the National Science Education Standards, addressing subjects in core areas including; life science, physics, chemistry, earth science and space and flight. The Classroom Kits include comprehensive lesson guides that provide science background and step-by-step photos of each experiment, all project supplies to complete each lesson, and web links for online instructional videos.

“Champions Science Adventures is committed to providing educational science programs that inspire a love of learning through engaging activities that explore cutting edge science concepts,” says Andy Allan, Director of Curriculum Development at Champions Science Adventures. “The new Science Adventures Classroom Kits provide educators across the country an easy, new way to incorporate science into their camps or recreation programs by providing the dynamic content. It’s a self-contained turn-key operation that’s easy to follow and can only add value to local offerings.”

Recognizing that hands-on activities encourage discovery learning, Champions has developed these Classroom Kits complete with all of the provisions to ensure that each student's experience with science is a fun and educational one. According to the National Science Teachers Association (NSTA), students learn and understand science best by actively engaging in hands-on science practices. By facilitating student interaction, children are able to easily grasp science concepts while developing essential teamwork skills.

“The Champions Science Adventures Classroom Kits have allowed us to offer families a versatile and educational summer program that keeps both the campers and the teachers engaged,” says Lisa Feinman, Assistant Executive Director of JCC on the Hudson. “Champions does an excellent job of packaging their curriculum into programs with all the bells and whistles that allow us to offer hands-on science that is more than just kitchen chemistry.”

The Champions Science Adventures Classroom Kits are a simple way to increase children's science literacy by incorporating a hands-on approach to discovery learning. The Champions programs support the objectives of the STEM Education Coalition, emphasizing the critical role that Science, Technology, Engineering and Math education plays in enabling the U.S. to remain the economic and technological leader of the global marketplace of the 21st century.

With these straightforward classroom kits, sites only need to provide the staff and market the program. Classroom Kits are available in sets of 1, 5, 10 and 20 with lessons that last anywhere from one hour to more comprehensive 20 hour programs. For more information on the Champions Science Adventures Classroom Kits visit [www.discoverchampions.com](http://www.discoverchampions.com) or call 303-526-3387.
